ABOUT ME

What I like to most, is to help people solving a problem. Any kind of problem.
My experience as Engineer working in an Agile environnement gave me tools to cut big problems into smaller ones, move toward the objective one step at a time, and keep my eyes focused on producing what bring the most value to users.
My experience as Team Coach offers me ability to organize workshops, trainings and develop relationship between people to make the "1+1=3" concept a reality in everyday and everyone's life.
My passion for the Palo Alto's Systemic Approach brought me the ability to better understand human complexity, by seeing problems from the higher picture, and focusing more on how to solve problems rather than spending time understanding why the problem exists.

EXPERIENCE

Team Coach & Facilitator

SonarSource - Geneva, Switzerland

January 2021 - present

My mission is to help groups of people (team, squad, bubble, circle, guild, council) to become more effective (work on the right thing), efficient (working the right way), and resilient (able to successfully deal with change).

Lead Developer

SonarSource - Geneva, Switzerland

September 2017 - December 2020

On top of developing features for the SonarQube and SonarCloud projects, I'm contributing on keeping our self-organized team on track with the growing challenge of supporting more and more users. I was leading the following technical topics: authentication, user management, and web services API.

Java Developer

SonarSource - Geneva, Switzerland

November 2012 - August 2017

Developing, from maintenance to development of new features (specification, implementation, testing, validation), of the SonarQube project.

Java Developer

Antaes - Geneva, Switzerland

August 2010 - October 2012

Developing, from maintenance to development of new features, of the nBDS project, a web application used to administrate Geneva schools.

Java Developer

Swissquote - Vaud, Switzerland

October 2009 - July 2010

- Developing new features on a new forex trading platform project. - Developing new features on existing customer signup application, introducing integration tests using Selenium.
